## Talking Drupal 164- Email Services

## A drupal\_mail() call behind the scenes 1. Set up default email message properties 2. Build the email (get subject and body, allow additional headers) by invoking the appropriate hook\_mail() implementation 3. Allow modules to alter the resulting email by invoking hook\_mail\_alter() Retrieve the responsible mail system class implementation which will handle the email public function format(\$message) { ... } public function mail(\$message) { ... } Format the email message by the format() method of the retrieved mail system class implementation Send the email by the mail() method of the retrieved mail system class implementation if the email sending hasn't been prevented 7. Return with the processed email message
